

Here is the architecture of our main codes

In these files: `G4_facets_preprocessing_VF` and `G4_opinions_preprocessing_VF`, you will find the preprocessing functions associated with each of our missions.

This file `G4_presentation_preprocessing_VF`, executes all the pre-processing part of our project. To launch it you will need to download `glove.twitter.27B.200d.txt` from the glove website as we could'nt put it on github.

In these files: `G4_facet_functions_VF` and `G4_opinion_functions_VF`, you will find the functions associated with each of our missions.

Finally the last file (`G4_presentation_results_VF`) executes our entire project; you will also find there all our interpretations.

We have an additional file called `G4_annex_VF` in which we present the things done but not used. Such as the named entity research functions.

All our functions are commented and described in the files.
